| Sequence 34, Application US/09306653
| Patent No. 6600026
| GENERAL INFORMATION:
| APPLICANT: Bamdad, Corthia C. | APPLICANT: Yu. Changlun
| TITLE OF INVENTION: Electronic Methods for the Detection of Analytes
| TITLE OF INVENTION: ULtilizing Monolayers
| FILE REFERENCE: A66343-1/RFT/RMS
| CURRENT APPLICATION NUMBER: US/09/306,653
| CURRENT APPLICATION NUMBER: G0/084,652
| EARLIER APPLICATION NUMBER: G0/084,652
| EARLIER APPLICATION NUMBER: G0/084,509
| EARLIER PELING DATE: 1998-05-06
| EARLIER PELING DATE: 1998-05-06
| EARLIER PILING DATE: 1998-08-17
| NUMBER OF SEQ ID NOS: 47
| SOFTWARE: PatentIn Ver. 2.0
| SEQ ID NO 34
| LENGTH: 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 36, Application US/09306653

Patent No. 6600026

GENERAL INFORMATION:

APPLICANT: Bandad, Cynthia C.

APPLICANT: Bandad, Cynthia C.

APPLICANT: Yu, Changjun

TITLE OF INVENTION: Electronic Methods for the Detection of Analytes

TITLE OF INVENTION: Electronic Methods for the Detection of Analytes

TITLE OF INVENTION: Electronic Methods for the Detection of Analytes

TITLE OF INVENTION: Electronic Methods for the Detection of Analytes

TITLE OF INVENTION: Electronic Methods for the Detection of Analytes

TITLE OF INVENTION: UNMERR: 60/094,653

CURRENT APPLICATION NUMBER: 60/084,652

EARLIER FILING DATE: 1998-05-06

EARLIER PILING DATE: 1998-05-06

Sequence 27, Application US/09177359B

Patent No. 618363

GENERAL INFORMATION:
APPLICANT: IABUDA, Damian
TITLE OF INVENTION: DATECTION OF CYPIAL, CYP3A4, CYP2D6 AND
TITLE OF INVENTION: NAT2 VARIANTS BY PCR-ALLELE-SPECIFIC OLIGONUCLEOTIDE (ASO)
TITLE OF INVENTION: ASSAY
FILE REFERENCE: 12667-17"US" FC/1d
CURRENT PILING DATE: 1998-10-23
NUMBER OF SEQ ID NOS: 37

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 27

LENGTH: 15

TYPE: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 15;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 33, Application US/08455972
Patent No. 5667955
GENERAL INFORMATION
PAPLICANT: BARSOUM, James G.
APPLICANT: ANDROPHY, Elliot J.
TITLE OF INVENTION: PAPLILOMAVIRUS E2 TRANS-ACTIVATION
TITLE OF INVENTION: PAPLILOMAVIRUS E2 TRANS-ACTIVATION
TITLE OF INVENTION: PAPLILOMAVIRUS E2 TRANS-ACTIVATION
TITLE OF INVENTION: REPRESSORS
NUMBER OF SEQUENCES: 33
CORRESPONDENCE ADDRESS:
ADDRESSED: FISH & NEANE
STREET: 1251 Avenue of the Americas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COMPUTER: TOOPY disk

PRIOR APPLICATION NUMBER: B156.19

PRIOR APPLICATION NUMBER: B156.19

REFERENCE/POCKET NUMBER: B156CIP

TELECOMMUNICATION INPORMATION:

TELEPHONE: (212) 596-9000

TELEPHONE: (212) 596-9000

INNFORMATION FOR SEQ ID NO: 33:
PILING DATE: 28-JAN-1992
ATTORNEY/AGENT INFORMATION:
NAME: Haley Jr., James N.
REGISTRATION NUMBER: 27,794
RESTRENCE/DOCKET NUMBER: B156CIP
TELECOMMUNICATION INFORMATION:
TELEFRANCE (212) 596-9000
INFORMATION FOR SEQ ID NO: 33:
SEQUENCE CHARACTERISTICS:
LENGTH: 16 Dase pairs
TYPE: nucleic acid
STRENDEDNESS: single
                                                                                                                                                                                                                                                                                                                                         TOPOLOGY: linear
MOLECULE TYPE: DNA (genomic)
FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   221 GGTGGCGCCAA 232

Sequence 5560, Application US/09371772B

Sequence 5560, Application US/09371772B

Patent NO. 6566127

GENERAL INFORMATION:
APPLICANT: Bacoco, Pam, Jim
APPLICANT: Bacobedo, Jaime
APPLICANT: Stinchcomb, Dan
APPLICANT: Stinchcomb
APPLICANT: Stin
GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Wittwer, Carl

APPLICANT: Hermann, Mark

TITLE OF INVENTION: Homogenous Multiplex Hybridization Analysis by Color and TM

TITLE OF INVENTION: Homogenous Multiplex Hybridization Analysis by Color and TM

FILE REPERENCE: A-68197/RFT

CURRENT APPLICATION NUMBER: US/09/651,374A

CURRENT FILING DATE: 1999-08-30

PRIOR FILING DATE: 1999-08-30

NUMBER OF SEQ ID NOS: 30

SOFTWARE PATENTING NOS: 30

SOFTWARE PATENTIAN OF SEQ ID NOS: 30

SOFTWARE PATENTIAN OF SEQ ID NOS: 30

LENGTH: 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Fatent No. 6566127

GENERAL INFORMATION:

APPLICANT: Blocyme Pharmaceuticals, Inc.

APPLICANT: Bavco. Pam

APPLICANT: Brochedo, Jaime

APPLICANT: Brochedo, Jaime

APPLICANT: Brochedo, Jaime

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

FILE REFERENCE: MBHB00,876-J (227/198)

CURRENT APPLICATION NUMBER: US 60/005,974

FRIOR APPLICATION NUMBER: US 60/005,974

FRIOR APPLICATION NUMBER: US 68/584,040

FRIOR PILING DATE: 1995-10-26

FRIOR FILING DATE: 1995-10-3

NUMBER OF SEQ ID NOS: 14222

SOFTWARE: Patent In version 3.0
